

**Narconon Schools Presentation Program
School Satisfaction Survey
Final Results (11/07/03)**

- Results are based on 33 postal questionnaires sent to teachers in schools who had recently taken part in the Program. Questionnaires were either faxed or posted back to MORI between 10 June and 8 July 2003
- This represents a response rate of 44%
- Reminder questionnaires were sent to schools which had not responded on 26 June
- All results are in the form of percentages
- Where results do not sum to 100%, this is due to computer rounding
- Refusals to answer specific questions or blank responses are not included in these results
- While the low base for this survey indicates caution, it does represent over 40% of all schools receiving the Program in the last two years. The table below shows the statistical reliability at the 95% confidence level for the results.

| Approximate sampling tolerances applicable to percentages at or near these levels ¹ | |
|--|-------|
| | \pm |
| 10% or 90% | 8 |
| 30% or 70% | 13 |
| 50% | 14 |
| * these figures based on sample size of 32 | |

For example if 50% of teachers say they are satisfied with the Program, the chances are 19 in 20 that the "true" value (which would have been obtained if all schools taking part in the program completed questionnaires) will fall within the range of ± 14 (Between 36% and 64%) percentage points from the sample results. Therefore, differences between two results in this example would need to differ by greater than around 28 percentage points to be considered significant².

¹ These margins of error have been calculated to take into account a finite universe of around 90.

² The calculation of what constitutes a 'significant difference' is a complex one. This should therefore be considered a guide only.

Q1. Overall, how satisfied or dissatisfied are you with the Narconon Schools Presentation Program?
